

**Silver Charm Dogwood**  
*Cornus alba 'Silver Charm'*

Height: 4 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 3a

Other Names: Tatarian Dogwood

**Description:**

A colorful and extremely hardy accent shrub with bright green and white summer foliage that progresses to yellow hues in fall, and striking dark red stems in winter; very versatile from a landscape perspective and quite carefree

**Ornamental Features**

Silver Charm Dogwood has attractive white-variegated grayish green foliage which emerges yellow in spring on a plant with a round habit of growth. The pointy leaves are highly ornamental and turn an outstanding yellow in the fall. It has clusters of white flowers at the ends of the branches in late spring. The dark red branches are extremely showy and add significant winter interest.

**Landscape Attributes**

Silver Charm Dogwood is a multi-stemmed deciduous shrub with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Silver Charm Dogwood is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

## **Planting & Growing**

Silver Charm Dogwood will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
